

TECHNOTE

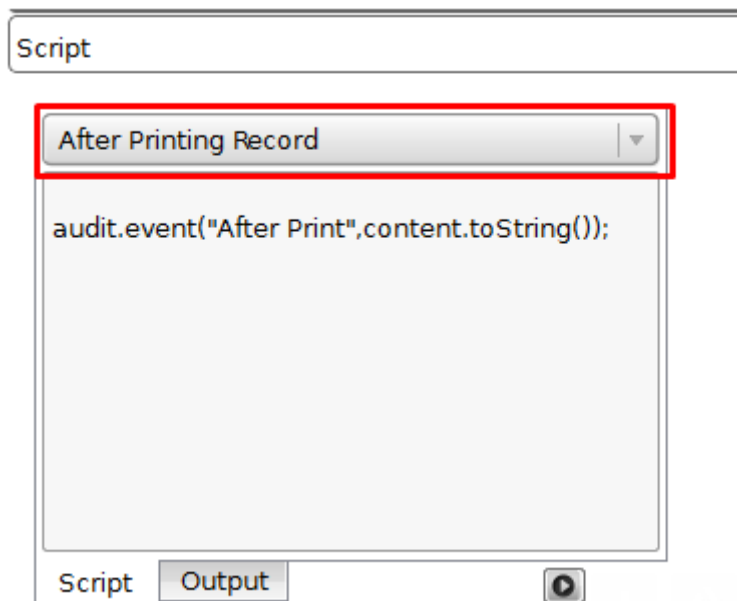

How to modify Bodno's Audit Report data

DATE: August, 2019

AUTHOR: Bodno

It is possible to modify the data presented in Bodno's Audit Report using Script. The sample card available for download [here](#) contains the script described below for you to test.

The instruction in the **After Printing Record** event (seen in the print screen below) indicates that, after printing each record, the data in the variable content will be added to the report.

In the **Audit Successful Print** event, the database columns which will be added to the report are concatenated into the variable content.

Script

Audit Successful Print

```

var content = currentRecord['Employee ID'] +
" " + currentRecord['First Name'] + " " +
currentRecord['Last Name'];

content.toString();

```

Script
Output
▶

The data will then be added to the Audit Report:

Operation	User	Document	Description	Event Result
Print Document	ADMIN	sample		
After Print	ADMIN	sample	0	
Print Document	ADMIN	sample	OK,1 Copies	1 Sonia Davolio
